

Aerial Photography Request

eAgribusiness can help you obtain digital ortho-rectified and geo-referenced aerial photographs of your farm(s).

Digital ortho-rectified and geo-referenced aerial photography can be used in all iFarm software products as the basis for producing farm maps that will allow you to:

- Locate and map out points of interest (e.g. farm hazards).
- Calculate distances and areas quickly and easily, including paddocks, fence lines, roads etc.
- Draw farm paddocks with arable and non-arable areas.
- Map out management zones within individual paddocks.
- Draw soil type boundaries across paddocks and farms.
- Create unlimited map layers including roads, water points, pipe lines, buildings and other farm infrastructure.

What do you need to provide?

In order to help us locate and provide a FREE quote on aerial photography for your farm(s), please provide the following information and forward to eAgribusiness.

Land Title: _____

Property Location Numbers

Include additional location numbers on a separate sheet if necessary

- A map showing the location of your farm(s) in relation to your nearest town(s).
- A map or sketch of your farm highlighting adjoining roads and any significant land marks or features (e.g. nature reserves).
